Linoleum. Attractive and pleasant to the touch. Linoleum is a material with a long tradition and is made from the natural and renewable raw materials linseed oil, resin, wood dust and limestone dust with natural colour pigments. Observers appreciate its elegance, the natural, durable properties, as well as its versatility as a functional and decorative surface. Specially designed for exclusive furniture and interior design surfaces, the unmistakable natural material is ideally suited for desktops and conference tables, racks, cabinet fronts, shelves, interior doors, partition walls and wall coverings. Thanks to its lush colour, it works well with wood designs, but is also a successful contrast in combination with metal or glass.

Information on the product

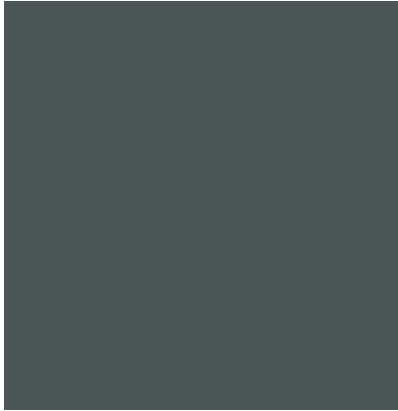

Linoleum flat bonded elements are available with a particle-board core P2 or a birch multiplex panel. The panels are faced on both sides with a 2 mm thick linoleum top layer.

A variant with a high-pressure laminate on the reverse side is also possible. The products linoleum flat bonded element birch multiplex and linoleum flat bonded element P2 are available in size 2800 x 1830 mm in various thicknesses.
